This invention describes a novel tetracycline assay that uses recombinant prokaryotic cells comprising a luciferase gene under the transcriptional control of a tetracycline repressor and tetracycline promoter and involves the detection of luminescence emitted form the cells. The assay can be used to distinguish tetracycline form other microbial agents. The invention also describes a novel plasmid comprising either the luxCDABE genes, a tetracycline repressor (TetR) and a tetracycline repressor (TetR) and a tetracycline promoter (TetR) and a tetracycline assay method can be used for the determination of tetracycline in a sample,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Firefly; luciferase; tetracycline; transcriptional control; TetA; TetA; tetracycline repressor; tetracycline promoter; luminescence; luxCDABE; insect; Tn10; medicine; dosage; cheese production; antibiotic; foodstuf.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           e.g. to study the dosage and penetration of the mechanism because also be used to test cheese production, as cheese making bacteria are not able to work in the presence of tetracycline. The method can also be used to determine the presence or concentration of antibiotics in foodstuffs, e.g. for allergic people. The present assay method does not rely on the growth of microbes as do conventional tests, and so is much more rapid. The present assay is also more sensitive, as even a small amount of luminescence can be detected
                                                                                                                                                                                                      Selecting monoclonal antibodies, hybridomas attached to antibody-lantibody library.
                                                                                                                                                                                                                                                                                                                                                                                           Breitling F,

This invention describes a novel method for the selection of monoclonal antibodies (MAb) which comprises (i) fusing B lymphocytes with myeloma cells to produce antibody-producing hybridomas such that the antibodies are presented at the surface of the hybridomas by an antibody-binding protein (I); and (ii) binding the antibody to antigens (Ag). The

The method is used to select MAb with specificity for particular antigens. MAb can be selected without separate culture of hybridomas, and selection can be made against many antigens in a library, optionally on the basis of strength of affinity for a particular antigen. Complex mixtures of hybridomas can be used for selection, reducing the time and cost involved in MAb selection. This sequence represents the bla protein protein contained in the expression vector pSEX15G2 which contains the bla protein, Neo-R and protein G described in the method of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CC This invention describes a novel method for the selection of monoclonal CC antibodies (MAb) which comprises (i) fusing B lymphocytes with myeloma CC cells to produce antibody-producing hybridomas such that the antibodies CC are presented at the surface of the hybridomas by an antibody-binding protein (I); and (ii) binding the antibody to antigens (Ag). The CC invention also describes antibody-binding proteins (I) that comprise a CC combination of the signal peptide of a murine immunoglobulin (Ig) kappa CC chain or a murine MHC (major histocompatibility complex) Class I k(k) CC molecule; an antibody-binding site of proteins A, G, L or LG, and the CC continents of PDGFR (platelet-derived growth factor receptor) CC or CD52. The method is used to select MAb with specificity for particular CC continents be made against many antigens in a library, optionally on CC mixtures of hybridomas can be used for selection, reducing the time and CC mixtures of hybridomas can be used for selection, reducing the time and CC cost involved in MAb selection. This sequence represents the Neo-R CC protein contained in the expression vector pSEXILL4 which contains the CC bla protein, Neo-R and protein G described in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Best Loc

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention describes a novel method for the selection of monoclonal CC antibodies (MAb) which comprises (i) fusing B lymphocytes with myeloma CC cells to produce antibody-producing hybridomas such that the antibodies CC are presented at the surface of the hybridomas by an antibody-binding CC protein (I); and (ii) binding the antibody to antigens (Ag). The CC invention also describes antibody-binding proteins (I) that comprise a CC combination of the signal peptide of a murine immunoglobulin (Ig) kappa CC chain or a murine MHC (major histocompatibility complex) Class I k(k) CC molecule; an antibody-binding site of proteins A, G, L or LG, and the CC transmembrane domain of PDGFR (platelet-derived growth factor receptor) CC or CD52. The method is used to select MAb with specificity for particular antigens. MAb can be selected without separate culture of hybridomas, and CC election can be made against many antigens in a library, optionally on the basis of strength of affinity for a particular antigen. Complex mixtures of hybridomas can be used for selection, reducing the time and CC cost involved in MAb selection. This sequence represents the bla protein CC protein contained in the expression vector pSEXII02 which contains the contains the contains the contains the sequence represents the bla protein contains the contains

                                                                                                                                                                                                                                                                                                                                                                                 Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  polymucleotide encoding a polymacharase under the transcriptional control of a surrogate promoter capable of increasing expression of the polysaccharase. The host cell also contains a second heterologous polymucleotide encoding a secretory polypeptide to facilitate the secretion of the expressed polysaccharase. The recombinant host cell is useful for producing polysaccharase which is useful for enzymatically degrading oligosaccharides such as lignocellulose, hemicellulose, cellulose, pectin or their combinations, and fermenting the product to ethanol, by simultaneous saccharification and fermentation processes. The present sequence is encoded by an integration vector which was introduced into cells to generate recombinant host cells. The vector contains a surrogate promoter from Zymomonas mobilis, the celZ gene from Erwinia chrysanthemi, resistance markers bla and tet, and Klebsiella oxytoca
                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 286 AA;

     Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   DB DB

beta-lactamase (EC 3.5.2.6) - phage phi-X174
C;Species: phage phi-X174
C;Date: 13-Jan-1995 #sequence_revision 13-Jan-1995 #text_change 09-Jul-2004
C;Accession: S47061
R;Henrich, B.; Schmidtberger, B.
submitted to the EMBL Data Library, July 1994
A;Description: A variant of phiX174 gene E-based positive selection vectors with enhanced A;Reference number: S47060
A;Accession: S47061
                                                                                                                                                                        RESULT 2

"X-ray structure of the Asn276Asp variant of the Escherichia coli TEM-
1 beta-lactamase: direct observation of electrostatic modulation in
resistance to inactivation by clarvalanic acid.";
Biochemistry 38:9570-9576(1999).

-I- FUNCTION: TEM-type are the most prevalent beta-lactamases in
enterobacteria; they hydrolyze the beta-lactam bond in susceptible
beta-lactam antibiotics, thus conferring resistance to penicillins
and cephalosporins. TEM-3 and TEM-4 are capable of hydrolyzing
ceftazidime. TEM-6 scapable of hydrolyzing
ceftazidime and ceftazidime. TEM-5 scapable of hydrolyzing
ceftazidime. TEM-6 scapable of hydrolyzing
ceftazidime. TEM-6 scapable of hydrolyzing
ceftazidime and ceftazidime. TEM-5 scapable of hydrolyzing
ceftazidime and ceftazidime. TEM-5 scapable of hydrolyzing
ceftazidime and cefta
